FM031f – EV Induction E-Learning

FLEETMASTER GROUP

Course description

This E-Learning course is a general induction to Electric Vehicles, and how you typically operate them, charge them, the differences compared to a traditional ICE vehicle, and also how to get the most out of the vehicle's range.

This is a general course that has multiple examples, but you should always refer to your vehicle handbook for the controls and information prior to driving a vehicle for the first time.

Who is the course for?

This E-Learning course is for drivers who are due to receive an electric vehicle, or who will be driving electric vehicles.

How do I complete the course?

Once we have received a request for a driver to be set up for the E-Learning course, and once that driver has then been set up, they will receive an email from noreply@fleetmastergroup.com containing their login details and the link to access the course.

This email can sometimes deliver into the junk/spam folder, so we recommend checking there if you cannot find the email.

Key facts

- Varies
- 1 login per colleague
- End of course assessment to confirm learning and understanding
- Remote
- eLearning system generated certificates
